

Fiat Devaluation

- In 2016, the average house price was \$288,400, which equated to 664 Bitcoin
- In 2018, the average house price was \$328,900, equating to 45 Bitcoin
- Today, the average house price is \$434,700, equating to ~ 6.6 Bitcoin

I mean, you can argue about this all day, but the fact remains that if you had saved your money in dollars (or worse, in another fiat currency) then everything, including houses, would have become a lot more expensive for you.

Whereas if you had saved in BTC, it would have become exponentially cheaper.

A hard reality check for people who keep slinging unfounded arguments against Bitcoin into the world. Just check the facts. Lose your bias and dive in.
